**EFFECTIVE DATE: JUNE 15, 2011**  
**REPLACES: AUGUST 1, 2010**

# TYPAR Weather Protection System

## Features & Benefits:

### Start smart with the **Typar® Weather Protection System**

- Used as a complete system, Typar provides the greatest protection against moisture/vapour transmission, water penetration and related damage.
- The Typar Weather Protection System provides the added protection and security of a 10 year limited warranty. If for any reason Typar Weather Protection System does not perform to published product typical characteristics, Typar will pay for the cost of labour and materials to correct the issue.
- Finish smart with Typar® Accessories
- Typar offers all the accessories you need to do the job right as part of the complete Typar® Weather Protection System.
- Typar® Flashing Flex  
A conformable flexible, composite peel and stick flashing product, ideal to flash around arched windows.
- Typar® Flashing RA  
A rubberized asphalt (RA) flashing that is an affordable choice with best-in-class performance. Designed for use in the Typar Weather Protection System, which is backed by a 10-year limited installed warranty.
- Typar® Construction Tape  
A strong, coated polypropylene film that seals seams and edges to ensure the integrity of the building envelope.
- The Typar® Weather Protection System provides the added protection and security of a 10-year limited warranty. See the specific details of the Typar® limited warranty on the Typar website [www.typar.com](http://www.typar.com).

## TYPAR® Flashing RA (Rubberized Asphalt)

SKU#	CASE	SIZE	SKID	LIST PRICE
TYPAR-FLRA-001	9	4" x 75'	504	\$25.16
TYPAR-FLRA-002	6	6" x 75'	336	\$36.66
TYPAR-FLRA-003	4	9" x 75'	224	\$52.74
TYPAR-FLRA-004	3	12" x 75'	168	\$70.72

## TYPAR® Flexible Flashing

TYPAR-TAPE-101	20	1280	\$13.90

# TYPAR® HouseWrap

## Features & Benefits:

Typar® HouseWrap delivers four key advantages you won't find with other housewraps:

- **Superior Water Holdout** — blocks water from entering the wall cavity.
- **Exceptional Moisture Vapor Transmission (MVT)** — it breathes so moisture can escape the wall cavity.
- **Superior Tear Strength** — proven to withstand heavy winds and is almost five times stronger than the leading competitive wrap.
- **Optimal Surfactant Resistance** — reduces the damaging effects that oils and tannins from OSB, soaps and powerwashing can have on the system's ability to block bulk moisture penetration.
- **UV Exposure - 6 months**

With Typar on the outside, homeowners feel more comfortable inside. Typar® eliminates drafts in the wall, which helps reduce energy costs. And the Typar® material itself will not support the growth of mold or disintegrate over time. Typar® HouseWrap offers superior protection that you and your homebuyers want, can count on and expect in their homes. CCMC 12884-R, 12892-R

## TYPAR® HouseWrap

SKU#	SIZE	SKID	CASE	SKID LIST PRICE	3+ SKID LIST PRICE
TYPAR3	9' x 100'	40		\$179.40	\$173.40

# TYPAR® Surround HouseWrap

## Features & Benefits:

- **Water Holdout** — Helps keep moisture from entering your walls during construction and after siding is up
- **Moisture Vapor Transmission (MVT)** — Allows moisture vapour to escape, reducing risk of mold and mildew
- **Tear Strength** — When installed properly, Surround offers excellent tear strength, which keeps the barrier intact and your wall cavities dry

Houswraps have become a best practice among builders all across Canada. Surround Housewrap protects your homes, and your reputation, from being damaged.

Maximum exposure permitted to UV rays is 90 days. CCMC 13230-R, 13231-R

## TYPAR® Surround HouseWrap

SKU#	SIZE	SKID	SKID LIST PRICE	3+ SKID LIST PRICE
TYPAR-SH	9' X 100'	40	\$151.74	146.62
TYPAR-SH-36	3' X 100'	36	\$51.14	49.60

# TYPAR® MetroWrap™

## Features & Benefits:

Typar MetroWrap stands up to the rigors of commercial construction with superior performance and toughness.

- **Superior tear strength** — up to five times greater than leading polymeric wraps and up to 20 times more than building paper.
- **Enhanced UV resistance** — up to 12 months of protection from UV degradation from the sun. This makes Typar MetroWrap an excellent choice for evolving construction schedules and an interim environmental barrier for interior construction.
- **Best Water Holdout** — protects interior environments during and after construction from air infiltration and damaging water.
- **Best Surfactant Resistance** — handles site exposure to harsh chemicals and cleaning techniques found on commercial jobsites.
- **Exceptional mold resistance** — will not support the growth of mold (ASTM D3273).
- **Improves Indoor Air Quality**
- **Excellent Air Barrier** — reduces energy costs over time; protects interior during construction.

SKU#	SIZE	SKID	SKID LIST PRICE
TYPAR-METRO-10X100	10' x 100'	40	\$249.68
TYPAR-METRO-5X150	5' x 150'	32	\$333.09

## Tuck Tape - Red Housewrap Tape

### Features & Benefits:

Tuck Tape is made of a UV resistant polypropylene film and coated with high shear, high tack solvent based acrylic adhesive.

#### MAIN FEATURES

- Water and moisture resistant.
- Excellent resistance to UV and weathering.
- Prevents air infiltration.
- CCMC approved, CCMC 11955-R

#### APPLICATIONS

- Sealing of joints and seams of insulation materials.
- Tape has to be pressed firmly on surface.
- Should be applied on clean, dry surfaces.

# TYPAR® Surround Roof Underlayment

## Features & Benefits:

Introducing a step up from felt. Surround® SR Underlayment, a Typar® brand, is a smart alternative to felt. Not only will it save time and energy, it also offers incredible secondary protection for all roofing projects. And, it's backed by the manufacturers of proven Typar weather-resistant barriers. Use the best roof underlayment all around.

- **Stronger** — 10 times stronger than 30# felt for the ultimate tear resistance, so it will not blow off during installation and helps eliminate the need for costly roof repair.
- **Drier** — the unique slip-resistant surface is waterproof to prevent moisture issues.
- **Lighter** — up to 10 times lighter than 30# felt so it's easy to carry onto a roof.
- **Faster** — in addition to having five times more underlayment per roll than felt, the rolls are also 25 percent wider for quicker roof deck coverage.

# TYPAR® vs TYVEK®

There's plenty of information (and misinformation) floating around as it relates to housewrap. As you can guess, Tyvek® makes a lot of claims as to the superiority of their product. But many of their claims are just misleading. Typar is a polypropylene nonwoven breathable weather membrane. Its technologically advanced design reduces the risk of moisture damage and mold growth in the wall cavity unlike any other product on the market, and the facts support it.

**FACT: Typar delivers the best balance of water holdout and breathability.**

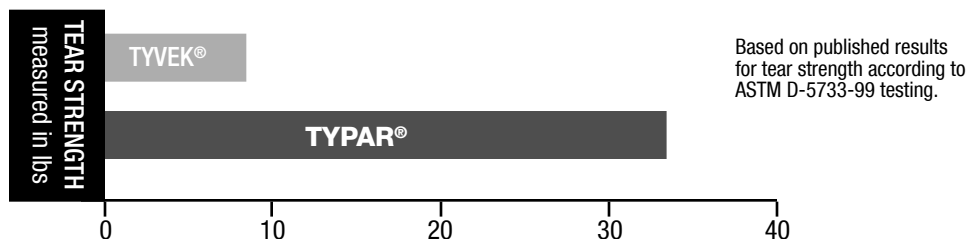

- Yes, Tyvek delivers higher raw numbers for breathability, it's the balance of the water holdout and breathability that's most important. Tyvek claims that higher is better, which is not the case in this particular instance.
- Typar technical experts insist that the true measure of a housewrap's effectiveness is the combined performance of water holdout and breathability (perm rating). Typar offers the best balance in the industry, which helps prevent moisture—and the problems associated with moisture—in wall cavities.
- If breathability is too low, moisture vapor will not be able to escape from the walls. If breathability is too high, moisture vapor will be able to escape, but the housewrap's ability to block water from the outside decreases. Typar delivers a perm rating of 11.7, which falls within the ideal range of 10–20.

Properties	Typar®	Tyvek®*	What it means
Water Penetration	>800 cm	220 cm	Typar is 4X more resistant to water penetration
MVT	11.7 perms	58 perms	Ideal number is between 10-20 perms
Trap Tear	33/33 lbs	6/6 lbs	Typar is 5X stronger than Tyvek
UV exposure rating	180 days	120 days	Typar offers 50% longer UV protection

\* DuPont published performance specifications

**FACT: Typar's tear strength is 5 times Tyvek's.**

Tyvek would like you to believe that their product stands up to the rigors of the jobsite better than Typar. But let's take a look at the facts. Typar delivers a tear strength that's five times that of Tyvek. This helps better protect the integrity of your weather protection system, which keeps moisture from entering your wall cavity.

**FACT: Tyvek may leave you exposed due its poor surfactant resistance.**

Conveniently enough, Tyvek doesn't even mention surfactant resistance in its literature. That's because it's another area where their product falls short. You see, once the siding is up and final inspection is complete, housewrap still needs to perform. Soaps from powerwashing and oils from cedar siding can degrade many housewraps. In fact, tests prove that soap degrades the surface of Tyvek. And once there's a hole in the barrier, water can easily penetrate the wall cavity, which can lead to all sorts of problems.

Typar will not degrade over time, which helps keep your wall cavities dry.

**FACT: Typar's UV exposure rating is 50% longer than Tyvek's.**

In field and lab tests, Typar offers 180 days of UV protection compared with Tyvek's 120 days.

***So now that you know the differences, which housewrap would you choose? The best-known, or the best-performing housewrap system? Choose Typar.***
